Wheel Accessories for today's aftermarket

800 854-6770

Chrome Center Caps for OE Alloy Wheels
Hub Ring Specialists

IMPORTANT!

DON'T THROW THIS CATALOG AWAY!

Every custom wheel dealer needs the information contained in this catalog, even if you don't purchase our products.

Regardless of the brand name or type of custom wheels you sell, we all must deal with wheel accessory hardware.

Your customer may only need a replacement cap or lug nut, or you might be looking for a full stock of assorted products.

The problem is the same for both of you and your customers, which ones do I really need?

Most wheel accessory catalogs are often deceiving, offering only pictures, and few measurements.

The parts look like the one you want, but when you receive the product you find it is too tall, too short, or not the right diameter.

How can this catalog help you?

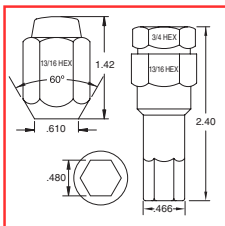

- * **Individual illustrations** of each different product.
- * **Life size drawings** of most parts let you actually compare and make the right choice.
- * **Detailed drawings** of wheel center caps show you exactly the diameter and height of each cap.
- * **Measuring guides** to help you decide exactly which items you want.
- * **Complete application guide** section included.
- * **Complete wheel installation guideline** included.
- * **Easy to read exact net pricing** on each item right in the catalog, no extra price list to fool with or discounts to calculate.

ORDERING/POLICIES

ORDERING INFORMATION & POLICIES

Our wholesale pricing is intended for those companies who are truly in an automotive related business. We reserve the right to refuse to sell to those companies who, in our opinion, are not qualified.

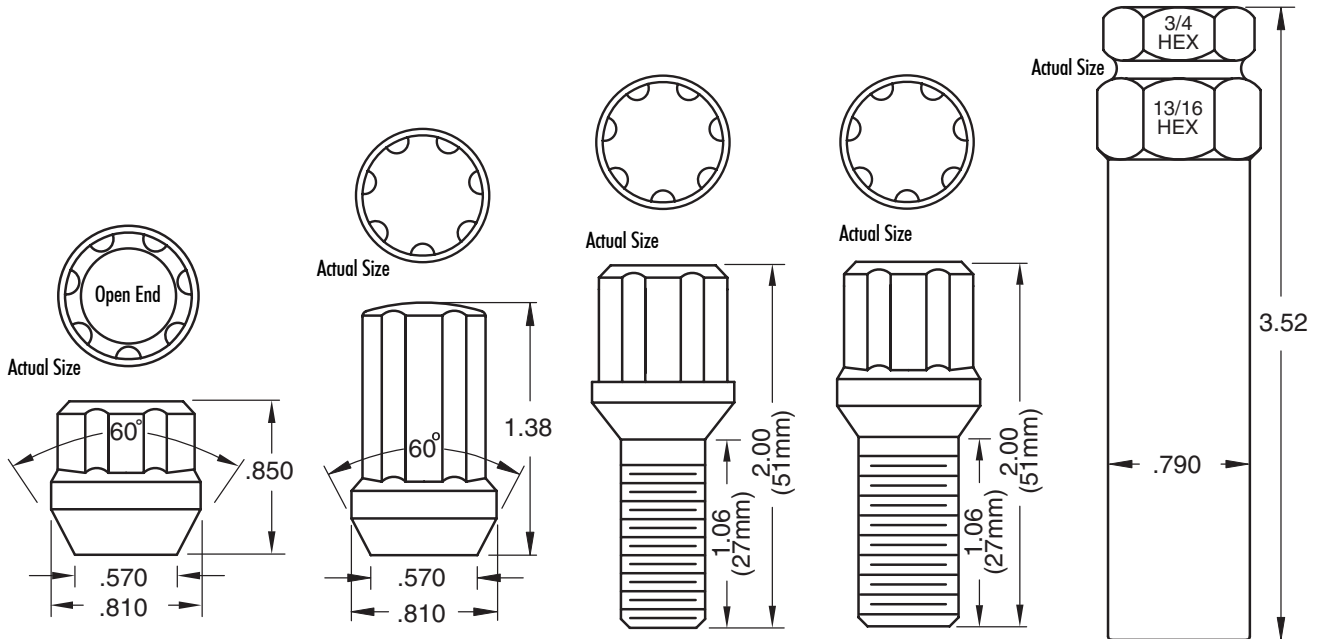

- ORDER SIZE:** The cost to process an order, regardless of size, is about the same. We will add a "small order" charge of \$10.00 to any order under \$50.00
- MOST products are prepackaged in specific quantities (i.e. MOST lug nuts are 100 per box). We will not break our normal packaging without a price adjustment.
- Check this CATALOG for standard packaging quantities.
- PRICING:** All pricing is based on current pricing that is in effect at the time of shipment. All invoices will be net priced. Any volume discount prices, special net quantity buys, freight allowances or c.o.d. payment discounts will be shown on the invoice. No other discounts are offered.
- As some of our products are affected by the changing foreign currency rates, we reserve the right to change pricing at any time and without prior notice.
- PAYMENT:** Cash ,cashiers check or credit card until your company check application has cleared. When your application is approved, then your company check will be accepted.
- CREDIT:** Credit is subject to management's approval. Until a charge account is set-up, all shipments will be on a C.O.D. basis. All credit privileges are subject to a periodic review.
- TERMS:** Based on order size, purchase frequency and credit approval, We offer the following payment terms:
- Credit Card (Visa or Mastercard).
 - C.O.D. Cash
 - Company Check with completed company check guarantee form.
 - Net 30 Days on approved credit application.
- ANY ACCOUNT WHO ALLOWS THEIR BILL TO BECOME 30 DAYS PAST DUE MORE THAN 3 TIMES WILL LOSE THEIR OPEN ACCOUNT CREDIT PRIVILEGES.**
- FREIGHT:** All orders will be shipped F.O.B. Huntington Beach, California. Unless specifically instructed by you, we will ship by the most convenient or economic way; normally by UPS.
- WARRANTY:** All products sold, are done so under the warranty policy of the actual manufacturer of the product. We offer or imply no other warranty.
- RETURNS:** All returns must have a return authorization number (RGA#). Returns without the RGA# clearly marked on the package will be refused. All returns must be freight prepaid, any freight collect shipments will be refused.

Thank you for your business!

NUT OR BOLT HEAD COVERS

17MM CHROME OR BLACK LUG BOLT COVERS

THOSE O.E. GUYS HAVE DONE IT TO US AGAIN!

Since 2000, the O.E. bolt supplier for both Mercedes Benz and BMW has changed their manufacturing process.

These new bolts now have a very slight concave on the side of the bolt where the lug wrench fits (see drawing). It is not truly flat.

Not to scale

As a result, Lug Bolt Covers that formally fit fine, now can be a little loose and may come off.

This has caused us to design a NEW Lug cover.

THERE IS SOME GOOD NEWS!

Now we offer 2 different part numbers.

One for the new style concave O.E. bolts.

One for flat O.E. and all aftermarket bolts.

We have designed the parts in a way so it is easy for you to tell the difference.

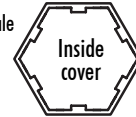

Turn the bolt cover over and look at the inside (see drawings).

Designed to fit ALL 17MM hex heads

The one with 6 little tabs on the inside is for the traditional style flat side bolts.

Our part # 99-9713

Not to scale

The one with 12 little tabs on the inside is for the new style concave side bolts.

Our part # 99-9712

LUG BOLTS

IMPORTANT

Lug bolt applications are much more difficult than lug nuts. For example, there are varying lengths, seats and thread sizes to consider. If an incorrect bolt is used, a wheel may fall off, someone may be killed or injured and you and/or your company could be sued. All this because someone didn't take a few extra minutes to choose the correct bolt for a specific application.

IMPORTANT THINGS TO LOOK FOR:

The origin of the wheel is vitally important, be absolutely sure if the wheel is...

- 1) an O.E. factory alloy wheel.
- 2) an aftermarket reproduction of a factory wheel.
- 3) an aftermarket style wheel.

While most O.E. factory wheels that are made in Europe (Mercedes-Benz, Audi, VW and some Porsche) use ball seat bolts, there are some exceptions (BMW, Saab and others) that use conical (cone) seat bolts.

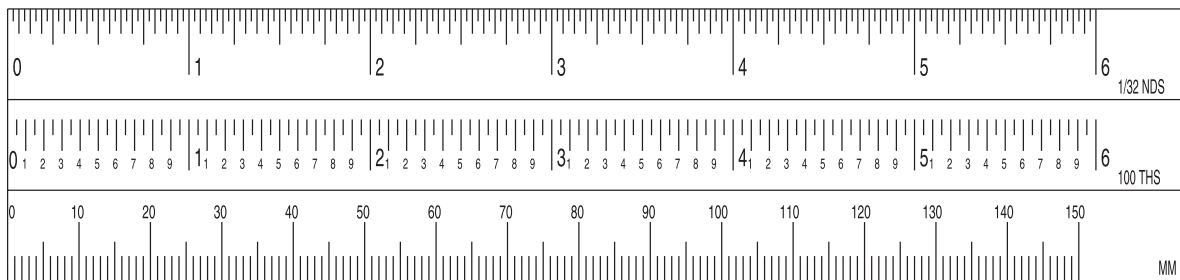

Reproductions and aftermarket wheels, depending on the company, vary greatly, so watch out! In fact, many wheel companies use both ball seat and conical seat lug bolts. Use the wrong style bolt seat, you will have major problems...guaranteed. If you are lucky and the wheel doesn't work loose and fall off, it will surely vibrate from incorrect seating.

It is impossible for Prestige Wheel Accessories to document all of the information about all of the many different wheel manufacturers and possible applications. It must therefore be the responsibility of you, the installer, to make the correct choice.

OUR POLICY ON BOLTS IS:

Prestige Wheel Accessories will make every effort to provide you with information so that you can make the correct selection. However, should the lug bolts you choose prove to be incorrect or not the ones you thought they were, Prestige is under no obligation to take them back. Should Prestige agree to accept the lug bolts back, it will be under the following conditions only:

- 1) the bolts must be new and unused merchandise in original resalable condition.
- 2) you must obtain an RTS (Return to Stock) number before shipping merchandise back to Prestige.
- 3) all freight back to Prestige must be prepaid.
- 4) a 20% restocking fee will be charged.
- 5) all credits or refunds will apply to merchandise only, no credit will be allowed for shipping costs.

RAD BOLT LOCKS

GEAR STYLE BOLT LOCKS

\$19.95
Per set of 4

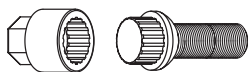

Made by one of Germany's top rated fastener manufacturers who has O.E. Contracts with several of Europe's widely recognized automobile manufacturers. Finished in Mercedes Benz specified Dacromet coating.

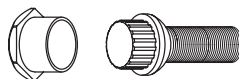

* Dacromet coating is a dull silver finish that provides a high corrosion resistance (500 hr salt spray). As specified by Mercedes Benz factory.

WHEEL INSERTS

BALL SEAT INSERTS

Ball Seat

WI510

Actual Size

Commonly used on foreign aftermarket wheels and some U.S. wheels that have the smaller (.510") stud hole.

The (.510") I.D. stud hole **is not** the most popular size because it will not accept a 14mm stud.

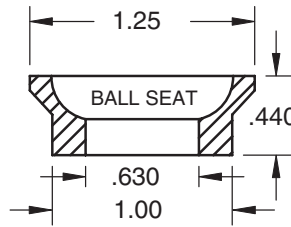

Boxes of 100

.35^c
each

Ball Seat 14mm

WI100

Actual Size

Commonly used on most U.S. aftermarket wheels that use the larger (.630) I.D. stud hole.

The (.630) I.D. stud hole size **is the most popular ball seat size** because it will accept a 14mm stud.

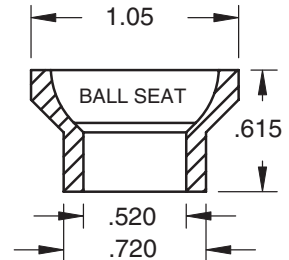

Boxes of 100

.69^c
each

Ball Seat O.E. Mercedes

WI8001

Actual Size

This insert is most commonly used in early factory O.E. Mercedes Benz 14" alloy wheels.

Often during the chrome plating process, the original inserts are lost or damaged. This insert is the exact replacement.

Boxes of 100

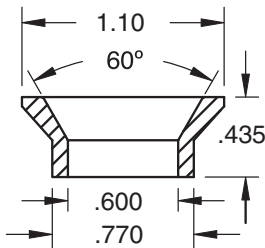

\$1.99
each

CONE SEAT INSERTS

Conical Seat

WI610

Actual Size

Commonly used on foreign aftermarket wheels and some U.S. wheels that use the smaller (.610") I.D. stud hole.

The (.610") I.D. stud hole **is not** the most popular size because it will not accept a 14mm stud.

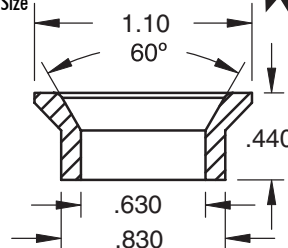

Boxes of 100

each

Conical Seat

WI630

Actual Size

Commonly used on most U.S. aftermarket wheels that use the larger (.630") I.D. stud hole size.

The (.630") I.D. stud hole size **is the most popular size** because it will accept a 14mm stud.

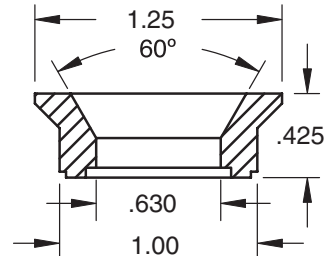

Boxes of 100

.29^c
each

Oversized Insert

WI660

Actual Size

Commonly used when redrilling wheels to change from one bolt pattern to another.

The large 1.250" O.D. of the outer helps to cover up the old bolt pattern. This insert has the popular (.630") I.D. stud hole.

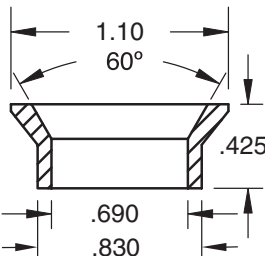

Boxes of 100

.69^c
each

Duplex Insert

WI690

Actual Size

Commonly used on most U.S. aftermarket wheels for duplex (.690") I.D. stud hole.

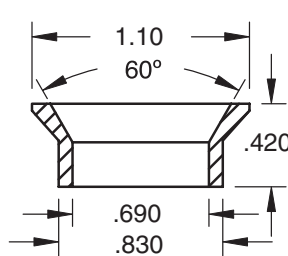

Boxes of 100

.99^c
each

Universal Insert Conical Seat

WI691

Actual Size

Optional (slightly smaller head) for most U.S. Aftermarket wheels that use duplex (.690") I.D. stud holes.

Boxes of 100

.99^c
each

CAPS FOR O.E.M. CHROME WHEELS

Chrome plastic caps to fit O.E.M. Alloy Wheels

Replaces the stock plastic cap on chromed wheels.

The Prestige Wheel Accessories Chrome Center Caps listed in this catalog are specifically designed for use on O.E.M. alloy wheels that have been chrome plated.

The caps described in this application guide are not actual factory parts and should never be sold or represented as actual O.E.M. products.

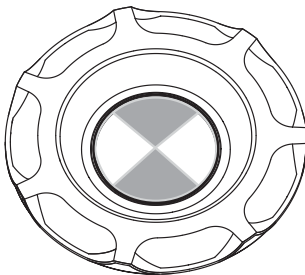

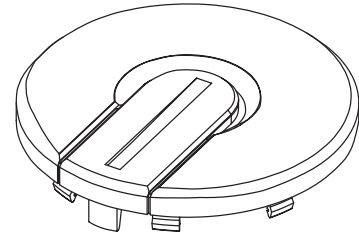

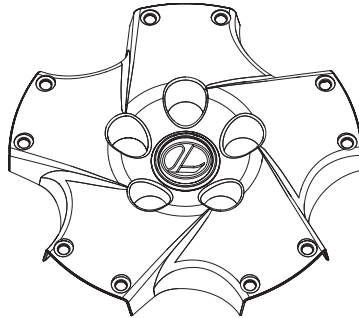

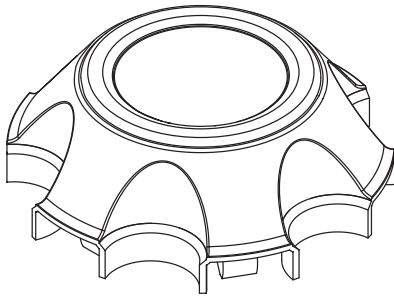

Most Prestige center caps have a smooth chrome plated face with no provisions for locating or mounting logos or badges.

However, some Prestige center caps are available with locating holes or grooves to facilitate the transfer and installation of O.E.M. emblems which have been removed from the original factory caps.

Prestige Wheel Accessories has developed several of its own design stylized logos, however we do not offer any reproductions of trademarked O.E.M. logos.

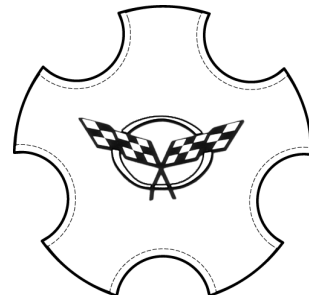

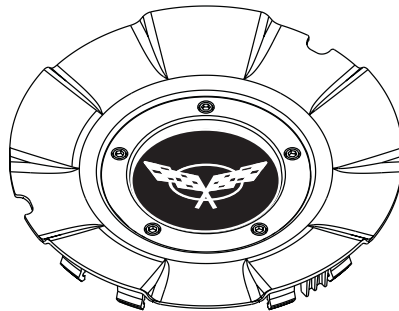

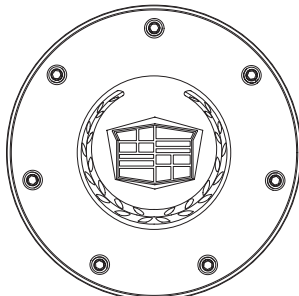

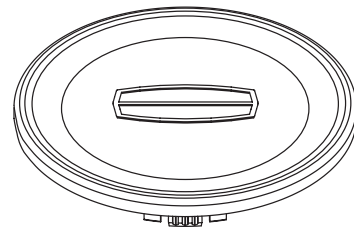

Prestige Wheel Accessories DOES NOT offer any reproductions of trademarked original equipment logos for sale.

SOFT SOCKET LUG WRENCH

Drawings not to scale

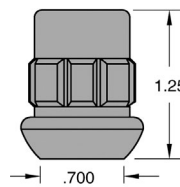

Lifetime Warranty

For Porsche alloy lug nuts. Won't mar expensive lug nuts because of the special socket liner.

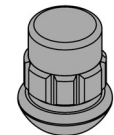

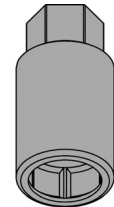

- **Patented Light Weight Design**
Sockets incorporate an exterior casing made of hardend steel filled with an *Ultra Hard Fiberglass Core*.
- **Exceeds Industry Standard Torque Recommendations**
(Max 200 ft lbs of Torque)
- **Protects Surrounding Surfaces**
Fiberglass core protrudes out from steel casing so that the face of the socket will not harm surrounding surfaces.

LUG WRENCH ADAPTERS

These handy lug wrench adapters are just what you need...

when custom wheels are installed and you want to retain the stock lug wrench that came with the vehicle.

Match up the male end to the original lug wrench and the female end to the new lug size.

You and your customer will be glad you went the extra mile when they have to change a flat tire.

RESALE CERTIFICATE

SALES TAX RULES/REGULATIONS

TO OUR CUSTOMERS:

In compliance with Sales and Use Tax Laws it is necessary that we have from ALL of our customers a signed resale certificate, with their State Sales Tax number, to show that the merchandise has been purchased for resale.

The good faith of the seller will be questioned if he has knowledge of facts which give rise to a reasonable inference that the purchaser does not intend to resell the property as, for example, knowledge that purchaser of particular merchandise is not engaged in the business of selling that kind of merchandise.

Under "Description of property to be purchased" there may appear:

1) Either an itemized list of the particular property to be purchased for resale
- OR -

2) A general description of the kind of property to be purchased for resale

Such certificate is good until revoked in writing.

Please make a photocopy of this page, fill out the resale certificate below with your sales tax permit number, signature and address, then return it to:

Prestige Wheel Accessories
16892 D Gothard Street
Huntington Beach, CA 92647

Or fax it to us at:
(714) 841-6413

HUB CENTRIC RINGS

HUB CENTRIC WHEELS AND HUB CENTRIC RINGS

WHAT IS THIS ALL ABOUT ?

We thought you might like to know what various manufacturers and tire dealers are asking about hub centric wheels and rings.

Q: *Exactly, what does hub centric mean?*

A: Hub centric wheels are manufactured so that when they are installed on a vehicle, the wheels are located directly off of the center flange of the brake drum or rotor.

This is done to insure that the outer beads of the wheel are concentric with the wheel bearings. The result is a much truer, better balanced tire/wheel assembly. This is very important with modern hightech suspension systems.

Q: *What about the phrase "Lug Centric"? Isn't it just as good?*

A: NO! Lug centric is a marketing phrase made up by the few manufacturers who don't offer hub centric wheels. Their theory is that if the wheels are drilled for conical seat lug nuts, then the wheels will self locate.

Surveys have shown that most installers just hang the wheel/tire combination on the studs and put on the lug nuts expecting the angle of the conical seat to pull the wheel/tire combination into concentricity.

Recent tests by several major wheel manufacturers have shown that when the above mentioned mis-locating occurs the studs actually bend down slightly thus creating an artificial out-of-round condition by as much as .0025

Consequently the custom wheel often gets a bad rap because of a poor installation job. Hub centric wheels or hub centric rings will correct this situation.

Q: *OK! I'm convinced that hub centric location is the way to go, so why not just use wheels that are already machined hub centric?*

Why bother with hub centric rings?

A: **INVENTORY FLEXIBILITY.**

Wheels drilled in a 4 x 100 bolt pattern fit 23 different brand name cars, but require 7 different bore sizes.

Wheels drilled in a 4 x 4.50 bolt pattern fit 12 different brand name cars, but require 6 different bore sizes.

Wheels drilled in a 5 x 100 bolt pattern fit 12 different brand name cars, but require 4 different bore sizes.

Wheels drilled in a 5 x 4.50 bolt pattern fit 20 different brand name cars, but require 9 different bore sizes.

By Stocking wheels that are machined hub centric to a specific bore size, it would require that you stock **26 different wheel part numbers** in each different wheel rim diameter size to get the coverage of these 67 applications.

If you use wheels which are machined for use with hub centric rings, you can get the same coverage with only **4 wheel part numbers.**

Q: *Which ring should I use, those hi-tech looking aluminum rings or the composite Polycarbonate plastic?*

A: While aluminum rings look Hi-Tech, they actually are not as good as the composite Polycarbonate plastic rings.

The drum or rotor snout of most vehicles are made of cast iron, so when a raw aluminum ring is placed directly against it and even a small amount of moisture gets in, corrosion occurs almost immediately, making it very difficult to get the wheel off of the car.

The composite Polycarbonate material acts like an "O"-ring, eliminating this common problem.

Q: *What hub ring sizes are available for various wheels and bores?*

A: Application information is provided on the following pages.

Prestige

HUB CENTRIC RINGS

PLEASE READ THIS FIRST!

When dealing with hub-centric rings it is important to visualize that a hub-centric ring is basically a reducer bushing.

These hub rings are designed to reduce the aftermarket wheel bore size from its current size to the O.E. bore size of the car you are trying to fit.

As manufacturers often make changes in their production system, we cannot absolutely guarantee the information we have provided on the following pages.

The information provided was collected from various dependable sources within the tire and wheel industry along with information supplied by O.E automobile manufacturers when possible.

This information is provided as a general guideline and should never be taken as absolute fact. When in doubt, you, the installer or user, must verify all information on the application in question.

Our policy on hub ring orders is as follows:

It is your responsibility to choose the correct ring for your particular application. Should the hub rings you choose prove to be inadequate for your needs, Prestige Wheel Accessories is under no obligation to take them back.

You purchased them, you own them.

THINGS TO CONSIDER

Manufacturers do make running changes during a model year and sometimes these changes affect wheel and tire sizes or attachment hardware.

Most automobile manufacturers offer some models with optional wheel and or tire combinations.

When in doubt check the specific vehicle in question.

Automobile manufacturers sometimes offer some special limited edition models with special wheel and or tire combination.

When in doubt check the specific vehicle in.

Sometimes automobile manufacturers make the same model vehicle in more than one factory location. We have seen cases where vehicles made in different factories use different wheel and tire combinations or attachment hardware.

When in doubt check the specific vehicle in question.

How to correctly order hub centric rings:

- STEP 1** Determine the center bore size of the aftermarket wheel you plan to install.
- STEP 2** Look up the vehicle you are trying to fit in the application information guide on pages #70 - #81.
- STEP 3** After finding the correct vehicle, note the "wheel I.D. hub bore" of that vehicle.
- STEP 4** Now with...the O.D. (the bore size of the aftermarket wheel) And... the I.D. (the O.E. locating flange size of the vehicle)
- Turn to our "hub ring list" on page #68 - #69 to find the part number you need.
- STEP 5** Call us toll free at 1-800-854-6770 and place your order.

REMEMBER... you need to know the following facts to order the right hub centric ring:

1. From: the aftermarket wheel information

manufacturer _____

center bore size _____

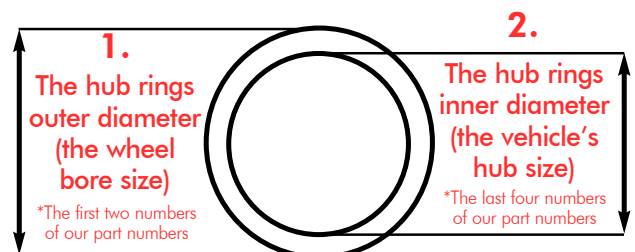

2. To: the vehicle information

year _____

make _____

model _____

hub locating flange size _____

HUB RING STORAGE KIT

Part# HR100

You pick the mix that best fits your needs.

Purchase 30 sets (120 rings) at \$1.75 per ring and we will include a **FREE** compartmentalized storage box with your order.

Your total purchase price is = \$210.00
(120 rings x \$1.75)

Bin with 32 compartments comes with a clear plastic lid that we will custom label with the part numbers you choose.

This allows for easy re-ordering.

Hub ring storage box with dividers and lid sold without rings \$48.99

DON'T DO'S

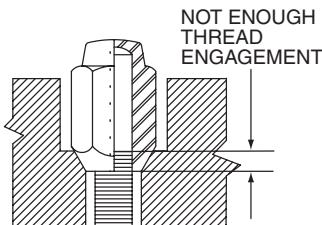

THIS CHART SHOWS DANGEROUS LUGNUT INSTALLATIONS THAT COULD RESULT IN DAMAGE, INJURY AND DEATH

TIP TOO SMALL

When the diameter of the nut at the tip is too small or the lughole in the wheel is too large it can cause the nut to bottom out against the base of the rotor or brake drum before actually seating against the wheel.

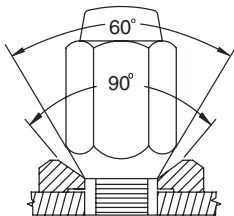

This will prevent the wheel from being properly secured.

STUD TOO SHORT

When the stud is not long enough to allow for 10 full turns of thread engagement.

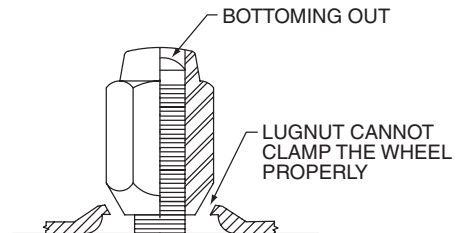

This often occurs when the center pad area of the wheel is extra thick and/or spacers have been used.

WRONG SEAT ANGLE

Never use a 60 conical seat nut on a wheel with a 90 conical seat lughole or vice versa.

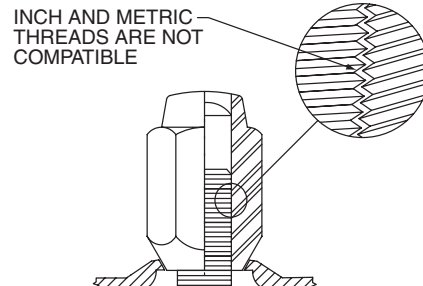

There will not be enough contact surface to properly secure the wheel.

LUGNUT TOO SHORT

If the lug is not tall enough or not threaded deep enough the stud will bottom out before the nut makes proper contact with the clamping surface.

This will prevent the wheel from being properly secured.

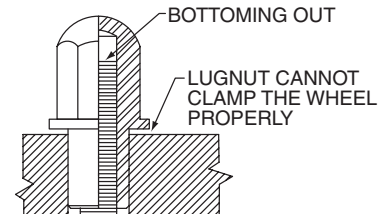

WRONG THREAD TYPE

Never try to use a metric thread nut on a US standard thread stud or vice versa.

While close

3/8 in and 10mm are not compatible
1/2 in and 12mm are not compatible
9/16 in and 14mm are not compatible

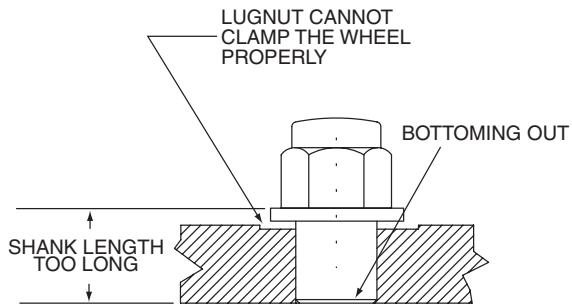

NOT ENOUGH THREAD IN THE NUT

Sometimes the nut appears tall enough but it may not be threaded deep enough.

This will cause the stud to bottom out in the top of the nut before the nut clamping surface properly mates to the clamping surface of the wheel.

A thorough understanding of this chart will greatly diminish the possibility of wheel loss due to improper lugnut installation. In order to help you understand this chart we will happily answer any question you may have.

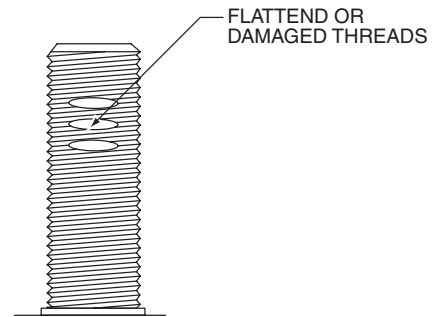

DON'T DO'S

SHANK TOO LONG

The shank length of the nut is too long.

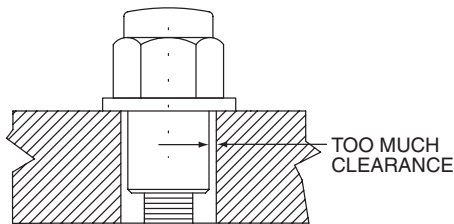

The end of the nut bottoms out against the rotor or drum surface before the nut clamping surface properly mates to the clamping surface of the wheel.

DAMAGED STUD

Damaged or flattened threads will cause the nut to seize up before proper contact of the clamping surfaces occur.

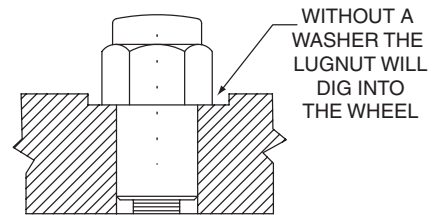

Any damaged stud must be repaired or replaced before nuts are installed.

WRONG SHANK SIZE

On mag shank style applications, the diameter on the lugnut is too small. The most common cause is using a passenger car lugnut on a truck wheel.

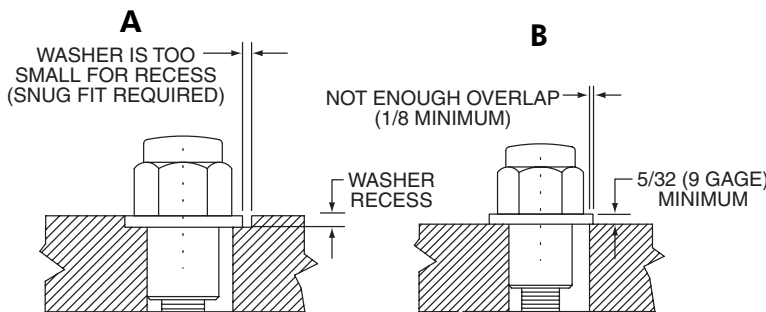

The total clearance between the lugnut shank and the wheel hole should not exceed 1/64".

NO WASHER

Mag shank style applications must be used with a washer.

If not the shoulder of the nut will dig into the softer aluminum preventing proper clamping of the wheel.

WRONG WASHER ON ELONGATED AND MULTIFIT HOLES

A) Aluminum wheels that have a specific washer recess should use a washer that was designed specifically for that recess.

The washer should fit snug and be the same shape.

Do not put a round washer in a oval hole or vice versa.

B) Wheels without a washer recess or Dual and Tri fit wheels must use a washer that overlaps the hole at least 1/8 in all around and is at least 5/32 in thick.

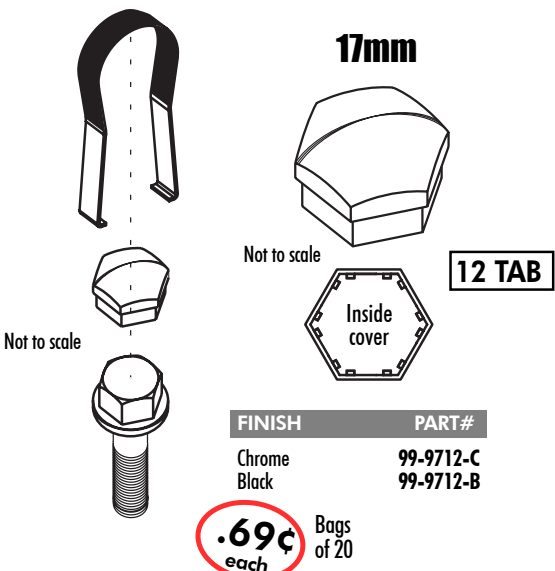

MOUNTING SURFACE INTERFERENCE

When the wheel cannot be mounted flush to the vehicle mounting surface due to some form of obstruction.

The most common is drum retainer clips, rivet heads or large calipers.

Custom Fabrication Division

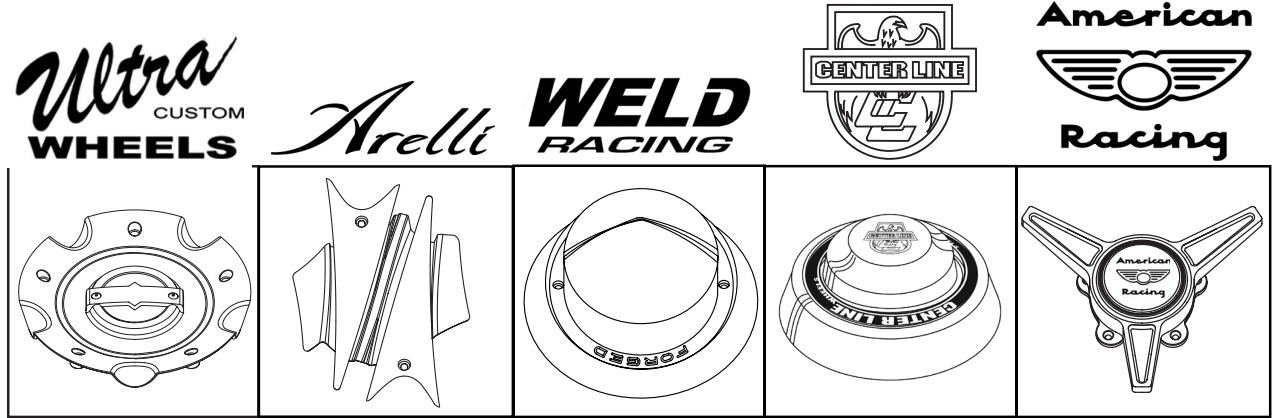

We can custom make special products for you. From rivets to body badges to centercaps. With our in house graphic and engineering departments, we can work with you from conception to delivery of product.

- Product Development
- Project Management
- Project Monitoring

- Single Contact
- Engineering & Graphic Arts
- Packaging & Delivery

A brief list of our major customers...

From Conception to Production

We have a knowledgeable staff of Engineers, Graphic Artists and Production Coordinators waiting to help you with your custom project from the first conception of the product to the final phases of meeting your production requirements.

With an extensive amount of experience in the automotive aftermarket business we have a wide variety of available colors, styles, designs and manufacturing capabilities to help you distinguish your style apart from the masses.

Dedicated to making overseas manufacturing... Less complicated - More profitable.

No project too big or too small. With quotes and pricing that can be customized to fit your company's needs.

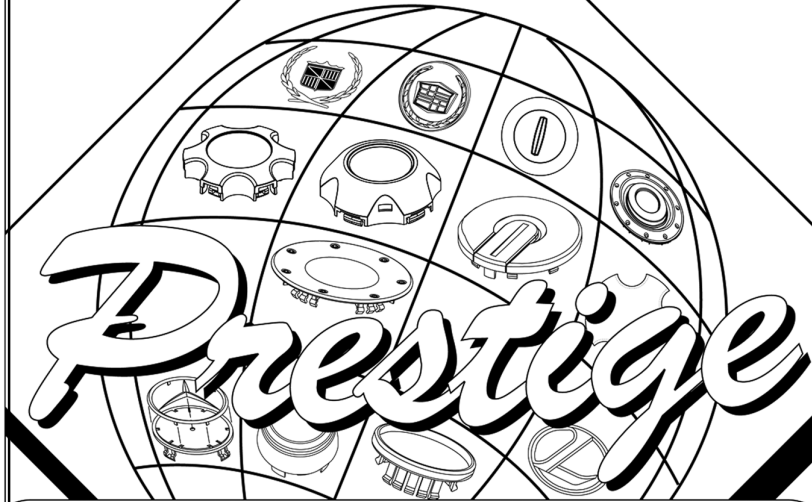

We offer a variety of services and experience that can give your company the competitive edge in today's global economy.

For a more thorough brochure on our custom manufacturing capabilities and services please contact our sales department.
